BASIC LINE

Rainwater harvesting in style

We love
our garden!

For over 50 years, Otto Graf GmbH has been offering highclass plastic products to its customers.

In 1974 GRAF developed its first pioneering range of rainwater harvesting products.

We are the market leader in Germany and Europe for plastic rainwater collectors.

Make some serious savings

Mains water is an expensive commodity – much too expensive to be used for watering plants. Rainwater harvesting is a perfectly available alternative. GRAF offers a range of stylish harvesting rainwater tanks for your garden which are both kind on your purse and extremely pleasing to the eye.

Smart people water their garden with rainwater

For plants, there's no water better than rainwater. It's clean, soft, well-behaved, free and falls from the sky on a regular basis. It's much better than tap water and ground-water, which are cold and often hard. Rainwater tanks are therefore becoming an increasingly common feature in gardens.

A special filter, which filters the precious resources and prevents the tank from overflowing, makes the ideal connection to the downpipe.

Manufacturing certified
according to ISO 9001

A special filter, which filters the precious resources and prevents the tank from overflowing, makes the ideal connection to the downpipe.

Manufacturing certified according to ISO 9001

There's a stylish tank to suit all tastes

Choose your tank from more than 60 sizes, shapes and colours

BASIC LINE

Essential for outstanding water quality
and convenient use

Page 34

Guaranteed GRAF quality

100 % RECYCLABLE

The tank material is 100% recyclable. We attach great importance to durable product design, right from the product development stage. Manufacture is carried out using state-of-the-art production facilities, which ensures that the environmental impact is minimised in the long run.

CHILD-PROOF

With their closed tank shapes or integrated covers, Graf decorative tanks are childproof.

INCLUDING MOUNTING ACCESSORIES

Each tank is supplied together with suitable assembly accessories. These may include an inlet seal, a plant mat for plantable tanks, and wind protection for tanks installed against walls.

TIP
The online product advisors under www.graf-water.com provides a good opportunity to get a quick overview of our stylish tanks. Choose your tank from over 60 sizes, shapes and colors!

UV-STABLE

Plastic tanks are protected against sunlight to ensure a long product life. The impact of UV light is reduced to a minimum.

WEATHER-RESISTANT

A rainwater tank is exposed to weather conditions and extreme temperature fluctuations. Materials adapted to these conditions ensure a long-lasting attractive appearance.

THREADED CONNECTION

A standard 19 mm (3/4") thread connection makes the tap (accessories) easy to install without drilling. Using a tap or the GRAF Universal Hose Kit (accessories), water extraction couldn't be easier.

Weight 112 kg
dark green order no. 326036

- Suited for garden and cellar installation.
- Can be extended in any way.
- 3/4" inner thread for simple fitting of the tap

Connection made easy:

Installation and connection of a GRAF decorative tank

DOWNPIPE FILTER

Downpipe filters reliably filter dirt from rainwater, thus ensuring optimal water quality. The water butt cannot overflow due to an overflow stop. The excess water simply flows back into the downpipe. In the winter, the inlet to the rainwater tank is easy to stop.

The downpipe filter ensures optimal water quality

The water butt fills up automatically and overflowing of the full water butt is prevented.

Easy switching from summer to winter use.

VIDEO TIP
How does a down-pipe filter work?
www.graf-water.com

Downpipe filter

Page 40

The ground must be level for the installation of a tank.

The downpipe is connected using a downpipe filter.

A hole is drilled in the tank for the installation of the inlet seal.

Tank accessories

Page 45

DRAIN TAP

Water extraction is made extremely convenient by the GRAF tap (accessories). It is screwed into the tank's standard thread connection without the need for drilling.

GRAF UNIVERSAL HOSE KIT

The GRAF universal hose kit (accessories) provides an additional extraction option. It is used to leverage the tank's full volume, and also as a fill level indicator. The hose kit (accessories) is either screwed into the tank's convenient connection or mounted on to the tank using a drill and a seal.

The integrated plant cup enables an individual design.

Your decorative tank is now perfectly installed and connected.

19 mm (3/4") with drill	504018
32 mm (1 1/4")	330031
51 mm (2")	330040

Underground tanks by GRAF

Quality products, Innovative solutions

Save drinking water

This is the slogan in times of ever increasing water prices. Rainwater harvesting systems from GRAF are the solution with which you can reduce your drinking water consumption by up to at least 50 %. Thanks to up-to-date technology and complete systems, which meet all your need in terms of convenience and reliability.

Rainwater harvesting...

- Conserves ground water resources
- Reduces the energy consumption needed for the purification of drinking water
- Unburdens wastewater treatment plants and canal networks, since peak levels during strong rain falls can be extenuated or delayed. ...is ecologically sound.

Prices:

A price list with our export conditions is available on request.

Warranty clause:

The warranty mentioned in this brochure only refers to the tank in question and not to the accessories. Within the warranty period we grant free replacement of the material. Further benefits are excluded. Pre-condition for warranty benefits are proper handling, assembly and installation according to the mounting guidelines.

Over and above the statutory regulation, GRAF is lengthening the warranty period for a number of underground tanks. This relates to proper handling, assembly and installation in accordance with the installation manual, as well as leakproofness, usability and static safety. The prerequisites of this are competent assembly and operation in accordance with the requirements, namely the currently valid installation and operating instructions and the prevailing standards.

N.B. Protect tanks from frost when installed aboveground! In case of groundwater installation, please contact us for further information previous to the purchase!

For all indications of measurements in this brochure we reserve a tolerance of +/- 3%. The useful volume of the tanks may be up to 10% lower than the tank capacity, according to the connecting option.

Technical modifications and further development of the different products are subject to change. Errors excepted.

For all our offers and conclusions of contract are only valid our General Terms and Conditions of Business dated 01/03/2010 which we will send to you on request.
